

REC'D JUL 27 2011

**The TrialNet Natural History Study of the Development of Type 1 Diabetes  
Phase 1: Screening for Blood Markers of Diabetes  
Assent Form—Children Ages 7-11**

IR Number: 10102

VM/BRI Acct. Number(s): 0192001, 329701

PRINCIPAL INVESTIGATOR: Carla Greenbaum, MD (206) 342-6931

SPONSOR(S): National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), National Institute of Allergy and Infectious Diseases (NIAID), National Institute of Child Health and Human Development (NICHD), National Center for Research Resources (NCRR), American Diabetes Association (ADA) and Juvenile Diabetes Research Foundation (JDRF).

24-hour emergency number: (206) 264-4322, ask for Dr. Carla Greenbaum.

PARTICIPANT'S NAME: \_\_\_\_\_

**INVESTIGATOR'S STATEMENT**

Since we are asking you to be in a research study, we want to tell you about it.

**WHAT WILL HAPPEN**

Someone in your family has diabetes. This means you have a greater chance of getting diabetes too. Diabetes makes people sick. Diabetes happens when there is not enough insulin in your body. Insulin is needed to give your body energy to run and play.

We can find out more about your chance of getting diabetes. If we find that you have more of a chance of getting diabetes, we will ask you and your parents if you want to continue in this research study. We will also ask you and your parents if we can save some of your blood sample to test later.

We hope this research study will help us to understand how people get diabetes. The study could also help us learn more about preventing diabetes. Being in this study is a free choice. You do not have to be in this study and if you do, you can change your mind and stop the study. No one will get mad at you if you do not want to be in the study.

If we find out that you are not likely to get diabetes now, you still might have a chance of getting it later. So we will ask you to come back once a year to repeat the blood test. Please ask any questions you might have.

**DISCOMFORTS**

To find out more about your chance of getting diabetes, we would need to stick with a needle to do a blood test. This could sting and you could be sore or have a

afterwards. Sometimes we would need to do this a second time in order to be sure of the results.

**PATIENT'S STATEMENT**

This study has been explained to me. I know I can change my mind. I agree to do this and no one is making me.

I agree \_\_\_\_\_ I do not agree \_\_\_\_\_ to participate in this study.
